

# Redefining Vulnerability Management With Vulcan Cyber

Vulcan is modernizing the way enterprises reduce cyber risk. With its remediation-driven approach, Vulcan automates and orchestrates the vulnerability remediation lifecycle, enabling security, operational and business teams to effectively remediate cyber risks at scale

So how do we do it?

## Handing you a solution

Vulcan Cyber curates the best solution for any given vulnerability, whether it be a patch, configuration change or workaround

## Highlighting the organization's biggest risks

By prioritizing the vulnerabilities in your organization according to the true business-risk they pose to your environment, the platform minimizes workloads and lowers costs

## Initiating and orchestrating cross-team remediation workflows

Vulcan Cyber helps establish cross-team alignment by managing and tracking all the steps in workflow from initial discovery to a successful remediation

## Automating the grunt work

By orchestrating the cyber hygiene lifecycle, Vulcan Cyber makes the repetitive, most time consuming tasks automatic

## Clear Security Posture

The Vulcan platform creates a clear view to the security posture of all existing assets in your organization. The platform promotes a holistic approach to vulnerability management, correlating and enriching the extracted data and putting it into context.

As so, Vulcan allows you to focus on the most important assets in your network, remediating the vulnerabilities that pose the greatest business-risk.

## Reports That CISOs Love

Vulcan presents strategic insights into your risk posture and remediation status, enabling clear reporting to stakeholders in the organization. The platform helps you understand, measure and present a birds-eye-view into the most crucial metrics of the organizational risk posture and your vulnerability management program's performance

It allows you to identify your organization's riskiest areas, focus on what matters most, and gain insight into systemic risk trends. Remediation-focused metrics expose a unique perspective into the remediation performance of your team and facilitates optimization.

The Vulcan platform enables security teams to effectively reduce cyber-risk. From detection to resolution, the platform automates and orchestrates the vulnerability remediation lifecycle at scale.
